

DataHub[®] OPC Logger

FULLY INTEGRATE YOUR OPC SERVER WITH ANY SQL DATABASE

Any database, any table, any conditions

Finally there's a convenient way to store and access process data from any OPC servers, regardless of which database program you need to use. As long as you can feed your system data to an OPC (DA or UA) server, you can use the DataHub OPC Logger to write it to local or remote ODBC compliant database. You can log OPC tag data to existing tables in your database, or create a new table from within the DataHub OPC Logger on configurable logging triggers.

No data gets lost

If the connection to the database goes down for any reason, the DataHub OPC Logger stores all the values locally, and sends them to the database when the connection is restored. Each data value change is stored with its timestamp, and gets written to the database in the sequential order that it occurred.

Read database entries back into your OPC server

You can also use the DataHub OPC Logger to make queries and send the results back to your OPC server or client application. This is useful for supervisory control, changing set points, sending recipes, and so on. Queries can be triggered based on a tag value changes, time of day, or repeat timers.

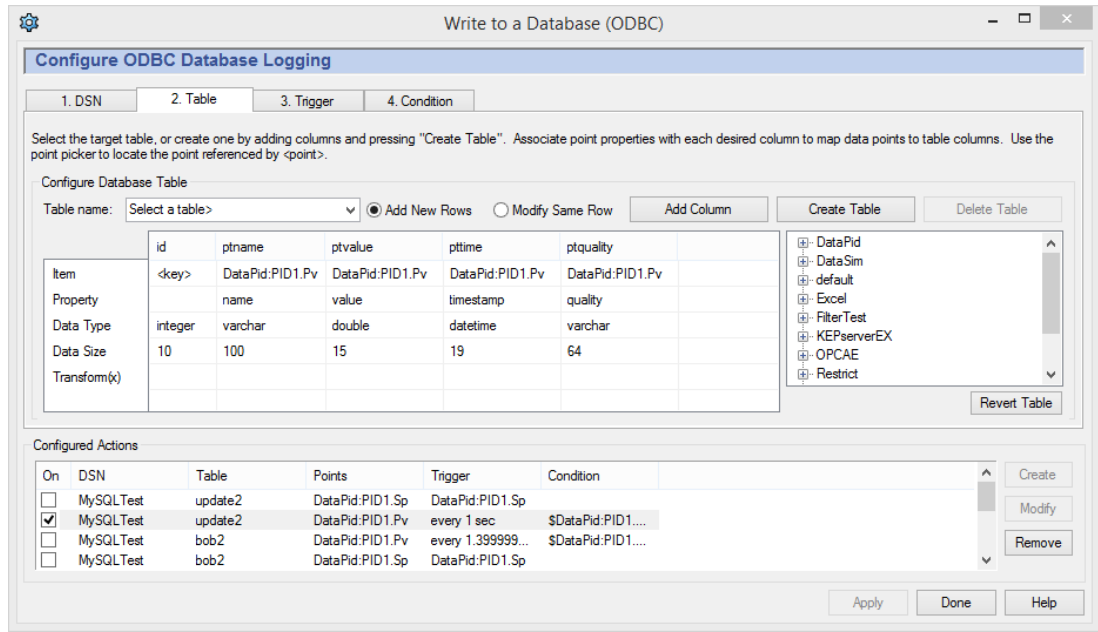

Benefits and Features

- Easy to configure using point and click interface.
- Start and stop logging or queries using fully customizable trigger events and conditions.
- Trigger logging or queries based on repeat timers, time of day, data value changes, or custom scripts.
- Works with your existing database tables, or easily create new ones.
- Store and forward feature ensures that all data gets logged in time-sequential order.
- Works on a local machine or over a network.
- Log to multiple databases, or combine data from multiple database sources and have them appear as a single unified data set within the DataHub

Fully integrated

Data logging and queries are often part of a larger system. The DataHub OPC Logger works with any OPC UA or DA server or client. Optional data-integration features include OPC tunnelling, redundancy, DDE connectivity, the ability to send email and SMS messages, as well as a web-based HMI, DataHub® WebView™, which allows you to view data from your database in numerical and tabular formats.

- Microsoft Access
- Microsoft SQL Server
- MySQL Server
- Oracle Database
- FileMaker
- Any other ODBC compliant database
- Sybase
- TimesTen

Ordering Information

PRODUCT	CODE	DESCRIPTION
DataHub OPC Logger	DHLOG	DataHub Core features with OPC DA and Logging
DataHub OPC UA Logger	DHLOGUA	DataHub Core features with OPC UA and Logging
