Screen: HD 22 inches

Weight: 54kg

Dimensions : L: 480mm,

H: 1455mm, P: 300mm

D-REX

OUR DELIVERY / RECEPTION STATION

The TYREX delivery station ensures the safety, integrity and authenticity of the data that leaves your organisation. Composed of a K-REX CONSOLE decontamination station, a printer and a CD writer, it performs a complete scan of incoming data, using several threat detection solutions before enabling the delivery on a blank media. The TYREX delivery station also produces detailed, printable delivery reports. It also serves as a decontamination station.

OUR PROTECTION AGENTS OPTION

THE WORKSTATION PROTECT AGENT

The agent is a software deployed on workstations that provides access to content or removable devices that have been certified by a TYREX station. It blocks access to files and devices that have not been certified, ensuring a maximum level of security.

THE HARDWARE AGENT

The TYREX hardware agent, developed in partnership with Seclab Security, allows you to secure and control the use of USB media in critical environments, in particular in industrial environments where the WorkstationProtect software agent cannot be deployed.
